

BR1

Booster

Your new pedal

Congratulations with your new SKRYDSTRUP R&D pedal.

The BR1 was designed to provide up to +25 of clean boost without changing your tone.

The pedal is housed in a rugged steel chassis, built to withstand the challenges of touring and extensive daily use.

All components have been carefully selected to ensure sonic qualities, low noise and years of trouble free use.

The BR1 features our unique RFI protection. All ¼" jack bushings used are gold plated, and all internal wiring utilizes high quality screened audio cable with minimum dc resistance and capacity.

The BR1

Use the BR1 in front of the amp as a switchable gain stage to push the amp a little harder, or use it in the effects loop of your amp for i.e. solo levels.

Controls

The BR1 features a BOOST control which will set the amount of boost added.

Also there is a toggle switch labeled "Std/Hi-Cut".

With the toggle switch you can select a High Frequency damping feature.

The ratio between the boost level control and the HF damping filter is linear. More boost – more damping.

Great for soloing!

When switched OFF (bypassed) the BR1 acts as a unity gain line driver, capable of driving even very long cables without tonal loss or coloration.

Connecting the BR1

All pedal connections are located on the rear side.

INPUT: High impedance guitar input (1 M Ω).

OUTPUT: Low impedance output (100 Ω).

9VDC: DC input. 5.5mm barrel / 2.1mm pin size

Requires 9V DC (center negative) and minimum 50mA in order for the unit to perform as designed.

Warranty:

Should the unit require repair within the 10-year warranty, please send the unit to us and we will resume responsibility for repair service, provided the unit has not been misused in any way.

Opening or modifying the unit will void the warranty. This warranty does not apply to any additional equipment that has been connected to this unit.

We reserve the right to make changes in design and/or improvements upon this product, without any obligations to include changes in products previously manufactured.
